Allowable Subject Matter

1. Claims 2 – 4, 6 – 23, 25 and 27 - 37 are allowed. The following is an examiner's statement of reasons for allowance.

Claims 4, 21, 23, 25 and 37 are respectively directed to

- *an image processing apparatus,*
- *an image processing system,*
- *an image forming apparatus,*
- *an image processing method, and*
- *a computer readable medium tangibly embodying a program of instructions executable by a computer to perform a method*

Claims 4, 21 and 23 identify the uniquely distinct features of:

wherein the arithmetic unit determines the number of color patches based on an evaluation standard,

wherein the evaluation standard includes a newly measured patch value and an average of patch values previously measured and stored as the history information

Similarly, claims 25 and 37 identify the uniquely distinct features of:

wherein the number of color patches is determined based on an evaluation standard,

wherein the evaluation standard includes a newly measured patch value and an average of patch values previously measured and stored as the history information.

Claims 6 and 27 are respectively directed to

- *an image processing apparatus, and*
- *an image processing method,*

Claim 6 identifies the uniquely distinct features of:

an arithmetic unit that compares the history information with information of new measurement of the color chart to determine number of color patches;

wherein the arithmetic unit compares a first difference with a second difference,

Art Unit: 2625

wherein the first difference is a difference between a newly measured patch value and a patch value measured last time and stored as the history information,

and the second difference is a difference between the newly measured patch value and an average value of the patch values previously measured and stored as the history information,

and when the first difference is equal to or greater than the second difference, the arithmetic unit determines the number of color patches based on a third difference.

wherein the third difference is a difference between the newly measured patch value and a patch value measured last but one.

Similarly, claim 27 identifies the uniquely distinct features of:

comparing the history information with information of new measurement of the color chart to determine number of color patches;

wherein the comparing includes comparing a first difference with a second difference.

Art Unit: 2625

wherein the first difference is a difference between a newly measured patch value and a patch value measured last time and stored as the history information,

and the second difference is a difference between the newly measured patch value and an average value of the patch values previously measured and stored as the history information,

and determining the number of color patches based on a third difference, when the first difference is equal to or greater than the second difference,

wherein the third difference is a difference between the newly measured patch value and a patch value measured last but one.

Claims 7 and 28 are respectively directed to

- *an image processing apparatus, and*
- *an image processing method,*

Claim 7 identifies the uniquely distinct features of:

an arithmetic unit that compares the history information with information of new measurement of the color chart to determine number of color patches;

wherein the arithmetic unit compares a first difference with a second difference,

wherein the first difference is a difference between a newly measured patch value and a patch value measured last time and stored as the history information,

and the second difference is a difference between the newly measured patch value and an average value of the patch values previously measured and stored as the history information,

and when the first difference is less than the second difference, the arithmetic unit determines the number of color patches based on a third difference,

wherein the third difference is a difference between the newly measured patch value and a measured patch value having a minimum difference from a representative vector indicating a representative color.

Similarly, claim 28 identifies the uniquely distinct features of:

comparing the history information with information of new measurement of the color chart to determine number of color patches;

wherein the comparing includes comparing a first difference with a second difference,

wherein the first difference is a difference between a newly measured patch value and a patch value measured last time and stored as the history information,

and the second difference is a difference between the newly measured patch value and an average value of the patch values previously measured and stored as the history information,

and determining the number of color patches based on a third difference, when the first difference is less than the second difference,

wherein the third difference is a difference between the newly measured patch value and a measured patch value having a minimum difference from a representative vector indicating a representative color.

Applicant's claims include elements which are not taught by the prior art nor rendered obvious. None of the references cited in the final office action, KUMADA [US Patent Application 2002/0145744 A1], BALASUBRAMANIAN [US Patent 7,064,860 B1], or KULKARNI [US Patent 6,870,636 B2] teach these limitations.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
